

### Features:

- Storage for 256 files
- Setup Mode button
- Setup Mode Lock and Unlock buttons
- Dual colour LED for status feedback
- Micro USB
- Powered via Autolube or USB

The ADS-3 is a compact Data Module for collecting log files from Autolube controllers on site for later download to a PC for analysis. Up to 256 files are stored by serial number on a first in first out basis.

Additional Lock and Unlock buttons allow the user to restrict access to the Autolube Setup Mode for added security.

The Setup button is used to enter and exit Setup Mode without the need to power-cycle the Autolube controller.

The unit is powered via the USB or Autolube connections.

An additional Pass-through mode allows the Autolube to be connected directly to a PC for live analysis.
